

# Downloading SMART 9.7 Notebook Software

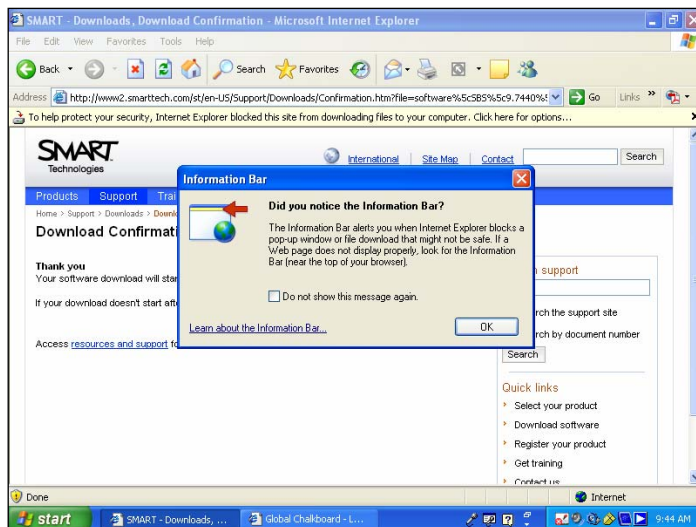

**Before you begin:** Remove any previous version of the *Smart Notebook* software that you may have installed on your computer. Go to Control Panel → Add Remove Programs → *SMARTBoard Software* and later the *SMARTBoard Essentials for Educators*. Then proceed as follows:

Go to the East Quogue School district website ([www.eastquogue.k12.ny.us](http://www.eastquogue.k12.ny.us)) and select *Support Services* → *Newsletter Links*  
Click on Smart Notebook Software (Version 9.7) and you will come to the screen shown below:

Read the instructions above and **“Download”** the 9.7 software. You will first be required to complete a form.

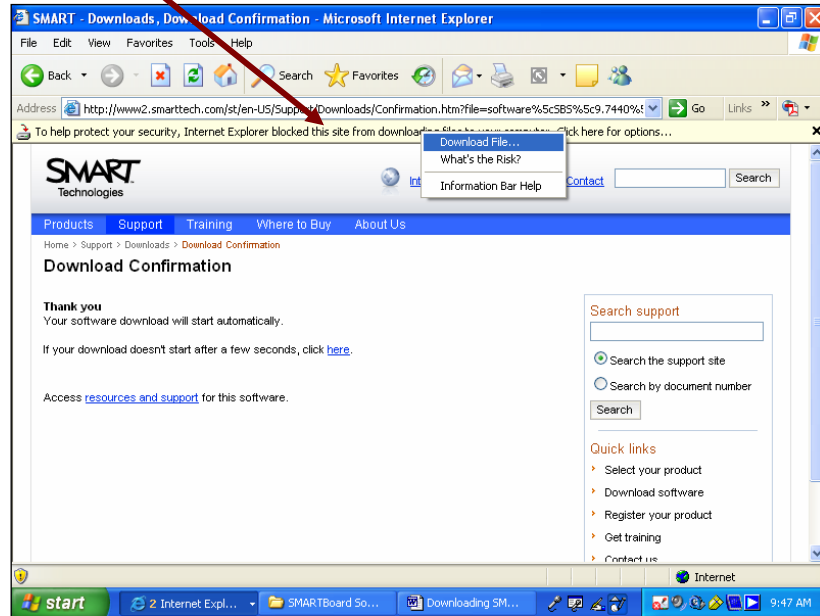

**NOTE:** On downloading you **MAY** see an Information Bar alert (see below). Click the **“OK”** button.

## Important Note:

At times, this download will go slowly. Please be patient and you will have an exceptional piece of software to use at home as well as at school. It's truly worth the wait!

If this *Alert Bar* comes up, right click on the yellow bar and select “**Download File**”.

Click on **RUN** at the next screen to start the download

You will probably need to click on **NEXT** several times to accept the license and install the software.

Eventually, you will need to click on **FINISH** to complete the installation.

*Note: You may be asked to configure the Smartboard the next time you start the computer. Say **NO** and this message should not come up again on your computer.*
